

DUAL STEERING STABILIZER

PART #: DSS01/DSS02 APPLICATION: XJ, ZJ, TJ

Even with the size of our replacement stabilizer, it sometimes won't do the job. With the tires getting bigger and bigger and with the chance of getting the dreaded "death wobble" the dual stabilizer will help ensure good handling and better tire wear. The kit comes with all bolt-on brackets and complete hardware. Can be mounted OVER the tie-rod by simply moving the mount.

- 1) Always secure and block vehicle prior to beginning the installation. Read instructions prior to installing parts. Turn wheels straightforward.
- 2) Bolt the tie rod bracket loosely to the tie rod.
- 3) Bolt the larger bracket with the large end down, to the driver's side of the axle housing with the 2 - 5/16 x 1 bolts supplied.
- 4) Install the steering stabilizer fixed end to the axle-housing bracket.
- 5) Extend the stabilizer out half way, approx. 4.5 inches, and determine the location of the tie rod bracket. Tie rod bracket should be down or under the tie rod. Tighten the nuts.
- 6) Remove the factory stabilizer, retain the axle mounting bolt, it will be re-used.
- 7) Install bushings into stabilizer.
- 8) Install stabilizer to axle mount with factory hardware and tighten.
- 9) Install to tie rod and tighten.
- 10) Make sure to turn the wheel all the way to the right and left to make sure there is no interference with the stabilizer or any part of the steering.
